One thing to note is that if your devices connected don't support MU-MIMO, it won't make a difference

do you have an AP that is MU-MIMO with no router? or do I need to buy a Nighthawk Router and put into AP mode? I have a Custome Router with Customer firmware, and just need better WIFI and really need MU-MIMO.

Is there any difference between Traditional router setup you explained in this video and SU - MIMO (Single User - MIMO)?
